

METHODS FOR TREATING MULTIPLE SCLEROSIS

Abstract of the Disclosure

This invention provides a method for treating a subject afflicted with multiple sclerosis comprising administering to the subject a therapeutically effective amount of soluble receptor for advanced glycation endproducts (sRAGE). This invention further provides a method for inhibiting CD4⁺ T-cell migration comprising contacting the CD4⁺ T-cell with soluble receptor for advanced glycation endproducts (sRAGE). This invention further provides a method for inhibiting chemokine receptor activation in a subject comprising administering to the subject a therapeutically effective amount of soluble receptor for advanced glycation endproducts (sRAGE).
